

What is NFDI4Health?

National research data infrastructure for personal health data

How can high-quality health data be made even more accessible to researchers in future?

This is precisely where NFDI4Health comes in: by expanding tried-and-tested services and establishing a sustainable infrastructure for data from clinical, epidemiological, and public health research, it creates the key prerequisites for FAIR* data sharing and integration into the European Health Data Space (EHDS).

Our mission: We enable researchers to handle these personal health data securely and in compliance with data protection regulations – through FAIR-based (findable, accessible, interoperable and reusable) services for storing, linking, enriching and sharing research data in a controlled manner.

Our Services & Tools

- **Health Study Hub & Local Data Hubs**
Centralised search, visibility, data inventory and data access
- **German Research Data Portal for Health (FDPG)**
Uniform access to health data – fast, transparent, centralised
- **Metadata schema & data management plan**
Frameworks for the structured organisation and planning of research data
- **DataSHIELD & Personal Health Train**
Secure, distributed data analysis
- **Data quality**
Quality assessment of health data
- **FAIR* training & workshops**
Training for researchers on FAIR* data management
- **Active policy and stakeholder engagement**
Further development of services in line with requirements and support for the integration of European data rooms

Benefits for You

- **Greater visibility & networking**
Studies and study documents are made visible in the Health Study Hub via their metadata and can be found for further research.
- **Interoperability of research data**
Compliance with established European data and metadata standards (EHDS)
- **Secure data access**
Distributed analytics solutions enable data analysis without compromising data privacy.
- **High-quality data for research & guidelines**
Structured, quality-assured data support the development of evidence.
- **Training & further education**
Training courses, workshops and resources will help you develop your skills in handling health data.
- **Strategic positioning within the EHDS**
Early involvement opens up opportunities to shape the development of European health data spaces.
- **Access to specialist expertise**
You will receive direct support with any queries regarding FAIR* data management, services and tools, and the legal framework for health data.

*FAIR principles in NFDI4Health

The FAIR principles form the foundation of our work at NFDI4Health – ensuring that research data remain visible, interoperable and scientifically usable in the long term.

- | | |
|----------------------|--|
| Findable | Data are clearly described and easily accessible via relevant platforms. |
| Accessible | Data are accessible to authorised users through a standardised, secure process. |
| Interoperable | Data use established standards and can therefore be combined with other sources. |
| Reusable | Data are quality-assured, clearly licensed and can therefore be reliably reused. |
